

# Asociación Mexicana de Neuroética A.C.

*(Mexican Association of Neuroethics)*

## WHO WE ARE

Is an organization consisting of an interdisciplinary group of professionals from different parts of the world who are interested in the growing and emerging medical, ethical, philosophical, legal, social and ethnocultural-diversity challenges derived from the development and use of neuroscience, neurotechnology and—because of its significant impact on human life—artificial intelligence.

Our approach is focused on sharing, collaborating on and complementing the work of the global academic community.

In this way, AMNE joins the international efforts to “address, enrich and anticipate the ethical, legal and social implications generated by innovative and emerging neuroscience and neurotechnologies” <sup>1</sup>

1. Neuroethics Working Group, 2018. OECD, 2017.

## OUR MISSION

To create a platform for intellectual, interdisciplinary and multicultural collaboration and contribution—with special emphasis on Latin America—to strengthen, develop and complement global efforts pertaining the ethical and responsible use of emerging brain technologies.

## OUR VISION

To be an academic force in neuroethics at the local, regional and global levels with the ability to foster (a) the development and use of emerging brain technologies, (b) the inclusion of cognitive and cultural diversity, (c) the implementation of public policies and legislation, (d) respect for human rights, and (e) the professional training of neuroethicists.

## OUR WORK

Since 2016 founders and members of the Association have been working on the development of the field of neuroethics by, for example, addressing local and regional needs and priorities and specific issues and perceptions related to context and culture such as indigenous medicine and beliefs; legal regulations and systems; and ethnocultural factors. We focus our work by means of activities such as academic sessions, working groups, quarterly newsletter, etc.

These activities also offer, among others, (a) communication in a native speaking language (i.e., Spanish), (b) cultural and contextual competence between peers (i.e., Latin America – including Brazil – and Spain) and (c) shared concerns related to context and culture (e.g., members and invitees from other LMICs such as Turkey, India, etc.)
